Care and Maintenance for Cultured Marble

REGULAR CLEANING

1. Because of mineral deposits and soap scum, it is important to clean your cultured marble parts regularly.
2. For normal cleaning of marble surfaces, do not use abrasive cleaners, steel wool, scouring pads, scrapers, or sandpaper on any part of the surfaces.
3. Use nail polish remover to dissolve adhesives.

CARING FOR CULTURED MARBLE VANITY TOPS/TUBS/SHOWERS

1. Water temperatures exceeding 130 degrees may cause cracking or crazing. (Temperatures above 130 degrees are dangerous to the skin even for very brief moments)
2. Clean only with liquid cleaners of a non-abrasive type. Example: Windex, 409, Simple Green, etc.
3. Protect the surface of your cultured marble with regular applications of wax (Gel Gloss, car wax, etc.)
4. To remove surface scratches, try a very mild abrasive such as toothpaste. Deeper scratches may require wet sanding with appropriate sandpaper (220, 400, or 600). Then, bring the shine back by buffing with an automotive buffer and polishing compound. Do not use rubbing compound, as this is too coarse.

5. On shower walls and tub areas, we have found a daily application of "Clean Shower" does a great job of eliminating water spots and soap scum buildup.
